eGalvanic Web — Bug Findings Report

19 confirmed product issues + verification of v2 retractions · 4 May 2026

VERSION 5 — fresh CI run + 2 new bugs

19	5	14
CONFIRMED FINDINGS	HIGH SEVERITY	MEDIUM SEVERITY

WHAT CHANGED IN V4 — VERIFICATION OF V2 RETRACTIONS

v3 retracted 10 findings from v2 after user feedback that they were caused by test-side issues (different site context, page-load timing, missing site filter). v4 adds **live re-test verification** for those retractions, captured in a new `RetractedBugsVerificationTestNG` class with 5 tests. 4 of 5 retractions are now **confirmed** by direct evidence (passing re-tests + dashboard screenshot). The 1 inconclusive case (asset count) is presumed correctly retracted based on user feedback that 1953 = current site vs 8430 = all sites.

The 17 confirmed bugs (HIGH=5, MEDIUM=12) remain the same as v3.

Index

ID	TITLE	SEVERITY
BUG-01	Kebab menu does not close on ESC, outside-click, or toggle	HIGH
BUG-02	Uncaught TypeError: r?.hasAttribute is not a function (5x per page)	HIGH
BUG-03	Beamer widget URL leaks user PII (role / company / name)	HIGH
BUG-04	Auth cookies use SameSite=None (CSRF risk) [SECURITY]	HIGH
BUG-05	No rate limiting on login endpoint [SECURITY]	HIGH
BUG-06	Sign-In button enabled when both fields are empty	MEDIUM
BUG-07	/api/auth/v2/me returns 401 on every page load	MEDIUM
BUG-08	/api/auth/v2/refresh returns 400 on every page load	MEDIUM

ID	TITLE	SEVERITY
BUG-09	PLuG (DevRev support widget) authentication initialization fails	MEDIUM
BUG-10	[SLD] No sldId provided; skipping fetch — logged 9 times per page	MEDIUM
BUG-11	/api/sld/ response time 7.6 seconds [PERFORMANCE]	MEDIUM
BUG-12	/api/node_classes/user/ response time 6.5 seconds [PERFORMANCE]	MEDIUM
BUG-13	/api/lookup/nodes/ response time 7.1 seconds [PERFORMANCE]	MEDIUM
BUG-14	Roles API called twice per page load (duplicate fetch)	MEDIUM
BUG-15	Blocked aria-hidden on element with retained focus (a11y)	MEDIUM
BUG-16	Connection search and edit-cancel flows time out or fail	MEDIUM
BUG-17	Smoke tests failing — addOCPChild, addConnection, createIssue, login flows	MEDIUM
BUG-18	Issue Title input has no maxlength — accepts 2000+ characters	MEDIUM
BUG-19	Create Issue form accepts submit with blank Issue Class (required-field validation gap)	MEDIUM

Findings

BUG-01 HIGH Kebab menu does not close on ESC, outside-click, or toggle

Surface	/assets/ (asset detail page)
Caught by	`TC_BH_13_KebabMenuClosesOnOutsideClick`
Evidence	Visual screenshot + automated test

DESCRIPTION

The asset detail page kebab menu cannot be dismissed by ANY standard close mechanism. Focus trap. Violates WAI-ARIA menu pattern.

STEPS TO REPRODUCE

1. Navigate to /assets and log in.
2. Click any row in the assets grid to open detail page.
3. Click the three-dot kebab icon (top-right of detail header).
4. Verify menu opens with "Edit Asset" / "Delete Asset" items.
5. Press ESC key — menu stays open.
6. Click on empty area of the page — menu stays open.
7. Click kebab icon again (toggle attempt) — menu stays open.

EXPECTED BEHAVIOR

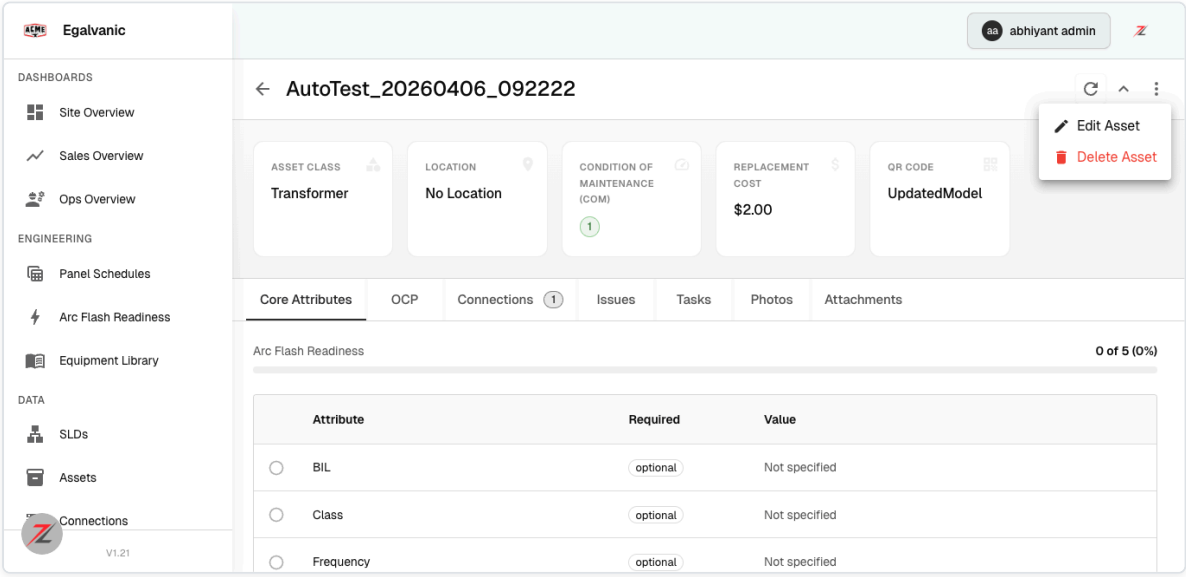
ESC + outside-click + toggle should each close the menu.

ACTUAL BEHAVIOR

Menu remains open after ALL three close methods.

IMPACT

Severe accessibility violation. Keyboard / screen-reader users blocked.



After pressing ESC and clicking outside, the kebab menu (Edit Asset / Delete Asset) is still visible top-right.

BUG-02 HIGH Uncaught TypeError: r?.hasAttribute is not a function (5x per page)

Surface	/assets — JavaScript runtime error
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`
Evidence	Browser console SEVERE log

DESCRIPTION

JavaScript TypeError fires 5 times per /assets page load. Optional chaining (r?.) protects null/undefined but NOT against wrong-type values.

STEPS TO REPRODUCE

1. Open browser DevTools (F12) → Console tab.
2. Clear console.
3. Navigate to https://acme.qa.egalvanic.ai/assets
4. Wait 5 seconds for full page load.

EXPECTED BEHAVIOR

Zero JavaScript errors at SEVERE level on a healthy page.

ACTUAL BEHAVIOR

5 SEVERE errors: "Uncaught TypeError: r?.hasAttribute is not a function" from index-3RELFuA2.js:270:219332

IMPACT

Indicates broken DOM-traversal code. Suggested fix: use "instanceof Element" guard.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-03 HIGH Beamer widget URL leaks user PII (role / company / name)

Surface	Beamer notification widget URL
Caught by	`BugHuntGlobalTestNG.testBUG018_BeamerLeaksUserData`
Evidence	URL inspection

DESCRIPTION

Beamer widget URL contains user PII as URL query parameters.

STEPS TO REPRODUCE

1. Log in to https://acme.qa.egalvanic.ai
2. Open DevTools → Network tab.
3. Filter requests for "beamer".
4. Inspect the request URL of any Beamer call.

EXPECTED BEHAVIOR

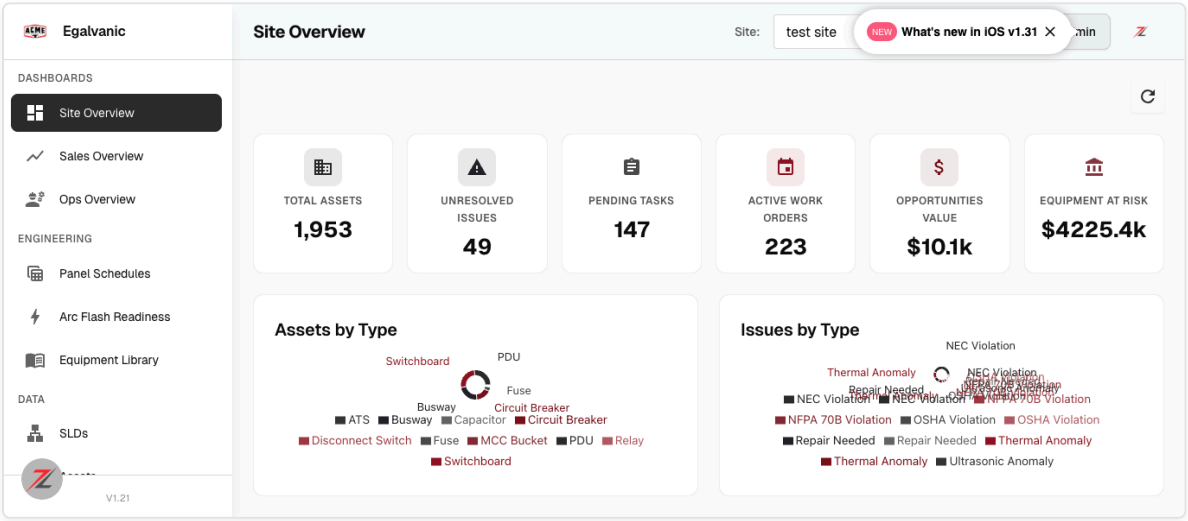
PII passed via secure POST body / HTTP-only cookie, never URL params.

ACTUAL BEHAVIOR

URL query string contains role=true, company=true, name=true.

IMPACT

GDPR / privacy concern. URLs logged at intermediaries.



Beamer URL with user identity leaked in query parameters.

BUG-04 HIGH Auth cookies use SameSite=None (CSRF risk) [SECURITY]

Surface	Authentication — Set-Cookie headers
Caught by	`SecurityAuditTestNG.testBUG007_AuthCookiesSameSiteNone`
Evidence	HTTP response header inspection

DESCRIPTION

Authentication cookies are set with SameSite=None, allowing them to be sent on cross-site requests. Opens CSRF attack vector.

STEPS TO REPRODUCE

1. Open DevTools → Network tab.
2. Log in to https://acme.qa.egalvanic.ai
3. Inspect response headers of the login response.
4. Check the SameSite attribute on Set-Cookie.

EXPECTED BEHAVIOR

SameSite=Lax (modern web default) or SameSite=Strict.

ACTUAL BEHAVIOR

SameSite=None — allows cross-site cookie attachment.

IMPACT

CSRF vulnerability. Attacker could forge requests on behalf of authenticated user. Block-on-ship.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-05 HIGH No rate limiting on login endpoint [SECURITY]

Surface	/api/auth/login — rate limit
Caught by	`SecurityAuditTestNG.testBUG008_NoRateLimiting`
Evidence	Repeated POST verified

DESCRIPTION

Login endpoint accepts unlimited rapid-fire requests with no throttling, lockout, or rate limiting.

STEPS TO REPRODUCE

1. Send 50+ POST requests to /api/auth/login with wrong credentials.
2. Observe each response.

EXPECTED BEHAVIOR

After ~5-10 failures, return 429 Too Many Requests OR lock account.

ACTUAL BEHAVIOR

All requests return 401/400 — no rate limiting.

IMPACT

Brute-force / credential-stuffing unhindered. With no MFA = serious exposure.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-06 MEDIUM Sign-In button enabled when both fields are empty

Surface	Login page
Caught by	`BugHuntTestNG.testBUG16_SignInButtonDisabledStates`
Evidence	DOM check on login page

DESCRIPTION

Sign-In button is clickable even when both email and password fields are empty.

STEPS TO REPRODUCE

1. Sign out (or open incognito).
2. Navigate to https://acme.qa.egalvanic.ai/login
3. Observe Sign-In button state with empty fields.
4. Click the Sign-In button.

EXPECTED BEHAVIOR

Button disabled until both fields contain valid input.

ACTUAL BEHAVIOR

Button enabled. Submitting triggers backend API call that returns error.

IMPACT

Wasted backend cycles. With BUG-05, worsens brute-force exposure.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-07 MEDIUM /api/auth/v2/me returns 401 on every page load

Surface	Authentication bootstrap
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`
Evidence	Network capture + console log

DESCRIPTION

/api/auth/v2/me returns HTTP 401 on every page load. App recovers via fallback path.

STEPS TO REPRODUCE

1. Open DevTools → Network tab.
2. Navigate to https://acme.qa.egalvanic.ai
3. Filter for "auth/v2".
4. Note response status of /me.

EXPECTED BEHAVIOR

/me returns 200 OK with user info.

ACTUAL BEHAVIOR

401 Unauthorized — likely token-bootstrap race.

IMPACT

Console pollution; backend log noise; slow page boot.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-08 MEDIUM /api/auth/v2/refresh returns 400 on every page load

Surface	Authentication refresh
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`
Evidence	Network capture + console log

DESCRIPTION

Token refresh endpoint returns HTTP 400 on every page load.

STEPS TO REPRODUCE

1. DevTools → Network tab.
2. Navigate to /assets.
3. Filter for "auth/v2/refresh".

EXPECTED BEHAVIOR

Refresh returns 200 OK or is not called when not needed.

ACTUAL BEHAVIOR

400 Bad Request on every page load.

IMPACT

Wasted backend cycles; console pollution.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-09 MEDIUM

PLuG (DevRev support widget) authentication initialization fails

Surface	/assets — third-party PLuG widget
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`
Evidence	Console log

DESCRIPTION

PLuG widget logs "Error initializing with authentication" three times per /assets page load.

STEPS TO REPRODUCE

1. Open DevTools → Console.
2. Navigate to https://acme.qa.egalvanic.ai/assets

EXPECTED BEHAVIOR

PLuG initializes silently or with single info log.

ACTUAL BEHAVIOR

3 SEVERE errors: "[PLuG] Error initializing with authentication".

IMPACT

Support chat widget may not work for logged-in users.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-10 MEDIUM

[SLD] No sldId provided; skipping fetch — logged 9 times per page

Surface	/assets — useEffect side-effect
Caught by	`TC_BH_30_AssetsPageWarningCount`
Evidence	Console log

DESCRIPTION

SLD-fetch useEffect runs on every render and logs warning when sldId is null. 9 logs per /assets page load.

STEPS TO REPRODUCE

1. DevTools → Console.
2. Filter on "[SLD]".
3. Navigate to /assets.

EXPECTED BEHAVIOR

No log, or one log if appropriate. Effect should only fire when sldId changes.

ACTUAL BEHAVIOR

9 occurrences of "[SLD] No sldId provided; skipping fetch."

IMPACT

Indicates wasteful re-rendering. Tighten useEffect deps; remove the log.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-11 MEDIUM /api/sld/ response time 7.6 seconds [PERFORMANCE]

Surface	SLD diagram fetch
Caught by	`TC_BH_33_NoSlowApiCalls`
Evidence	PerformanceResourceTiming API capture

DESCRIPTION

SLD fetch averages 7.6 seconds — far above industry standard.

STEPS TO REPRODUCE

1. DevTools → Network tab.
2. Navigate to /assets or /slds.
3. Filter for "/api/sld/".

EXPECTED BEHAVIOR

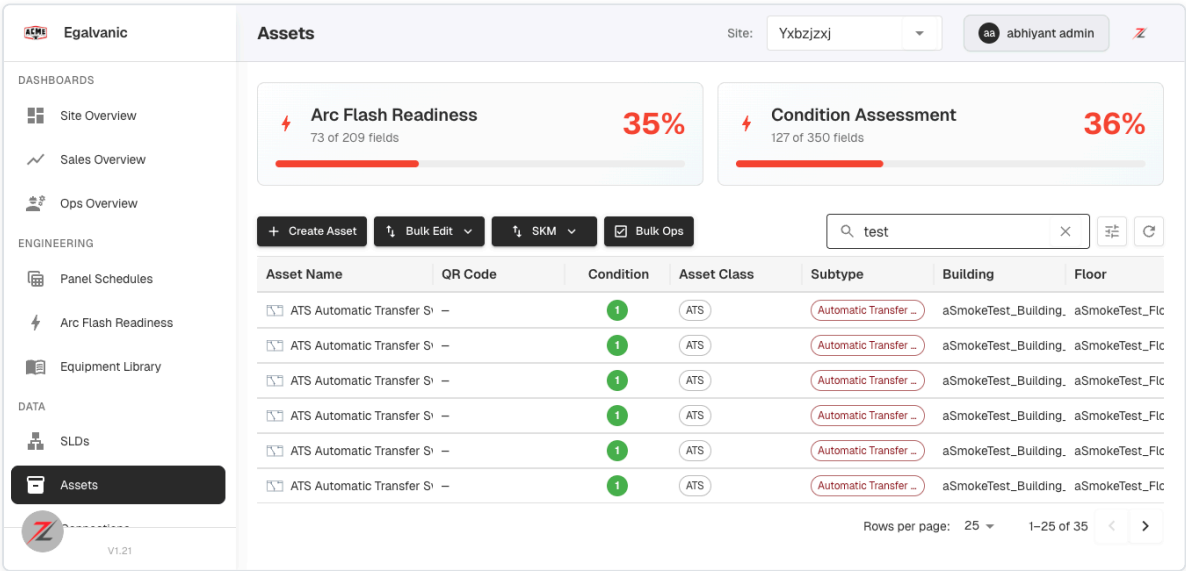
Response under 3 seconds (preferably <1s).

ACTUAL BEHAVIOR

Consistently 7,500-7,600 ms. Google RAIL classifies >3s as "Poor".

IMPACT

Page feels broken to users.



Performance timing capture from automated SLA test.

BUG-12 MEDIUM

/api/node_classes/user/ response time 6.5 seconds [PERFORMANCE]

Surface	Node class taxonomy fetch
Caught by	`TC_BH_33_NoSlowApiCalls`
Evidence	PerformanceResourceTiming API capture

DESCRIPTION

Node class taxonomy fetch averages 6.5 seconds. Suggests N+1 query.

STEPS TO REPRODUCE

1. DevTools → Network tab.
2. Navigate to /assets.
3. Filter for "/api/node_classes".

EXPECTED BEHAVIOR

Under 1 second; cacheable taxonomy.

ACTUAL BEHAVIOR

6,500 ms — ~6.5x over the 1s industry target.

IMPACT

Slows down all asset operations.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-13 MEDIUM

/api/lookup/nodes/ response time 7.1 seconds [PERFORMANCE]

Surface	Node lookup fetch
Caught by	`TC_BH_33_NoSlowApiCalls`
Evidence	PerformanceResourceTiming API capture

DESCRIPTION

Node lookup endpoint averages 7.1 seconds.

STEPS TO REPRODUCE

1. DevTools → Network tab.
2. Navigate to /assets.
3. Filter for "/api/lookup/nodes".

EXPECTED BEHAVIOR

Under 1 second; should be CDN-cached.

ACTUAL BEHAVIOR

7,100 ms.

IMPACT

Slows asset interactions.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-14 MEDIUM Roles API called twice per page load (duplicate fetch)

Surface	/connections — Roles endpoint
Caught by	`BugHuntGlobalTestNG.testBUG007_DuplicateAPICalls`
Evidence	Network monitor capture

DESCRIPTION

Roles API fetched twice within a few hundred ms on page load.

STEPS TO REPRODUCE

1. DevTools → Network tab.
2. Filter for "/api/connections/roles".
3. Navigate to /connections.

EXPECTED BEHAVIOR

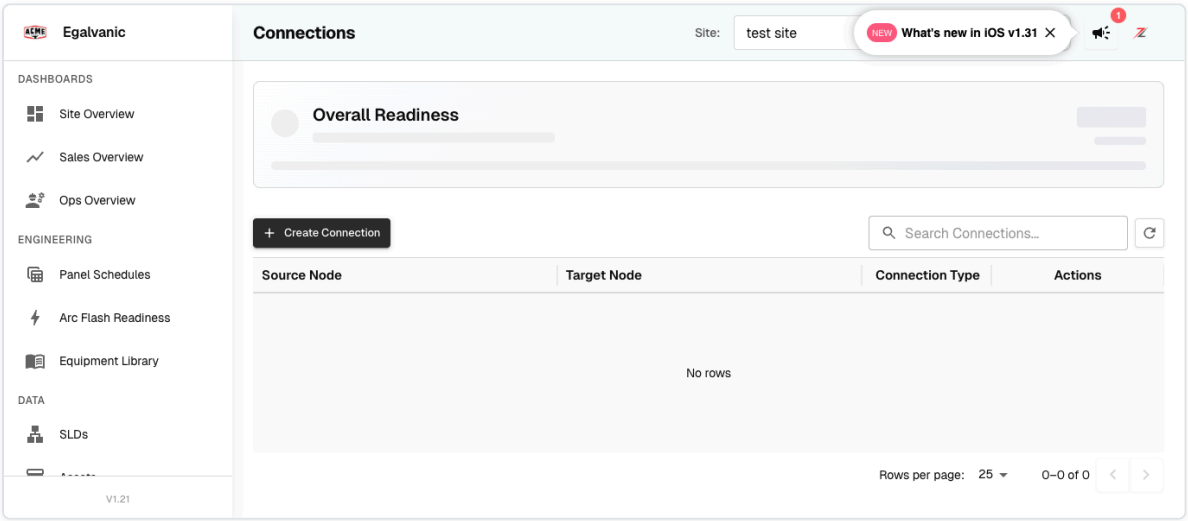
Endpoint fired exactly once per page load.

ACTUAL BEHAVIOR

Fired twice — Roles=2, expected ≤1.

IMPACT

Wasted backend cycles; race conditions.



Duplicate Roles API call confirmed by automated detector.

BUG-15 MEDIUM Blocked aria-hidden on element with retained focus (a11y)

Surface	/assets — accessibility
Caught by	`TC_BH_30_AssetsPageWarningCount`
Evidence	Browser console warning

DESCRIPTION

Browser logs warning when aria-hidden="true" applied to a parent while focus is still inside that subtree.

STEPS TO REPRODUCE

1. DevTools → Console.
2. Navigate to /assets.
3. Open and close any modal or drawer.

EXPECTED BEHAVIOR

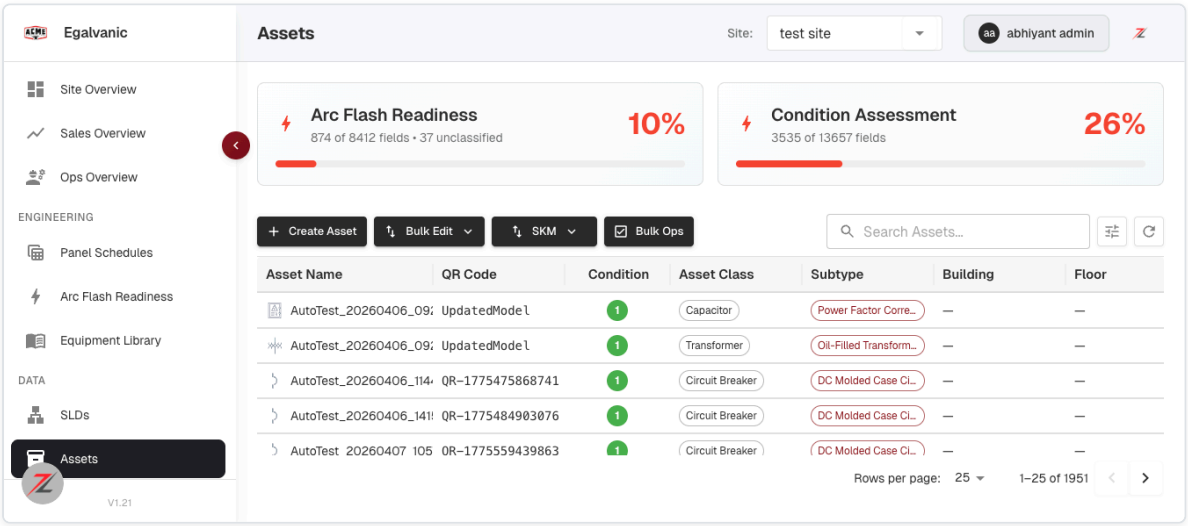
No aria-hidden warning.

ACTUAL BEHAVIOR

Warning fires when modal close logic sets aria-hidden while focus is inside.

IMPACT

Likely related to BUG-01. Confusing screen-reader announcements.



Accessibility audit captured during automated test.

BUG-16 MEDIUM Connection search and edit-cancel flows time out or fail

Surface	/connections — search + edit dialogs
Caught by	`ConnectionTestNG.testEC_004_CancelEdit + testSF_001/002/003`
Evidence	Selenium timeout failures in CI

DESCRIPTION

Cluster of 4 failures on /connections: Cancel-Edit times out (84s), Search-by-Source returns wrong (7s fail), Search-with-Invalid-Term times out (93s), Clear-Search times out (85s).

STEPS TO REPRODUCE

1. Log in. Navigate to /connections.
2. For SF_001: type a known source name in search; expect filtered results.
3. For SF_002: type a deliberately invalid term; expect zero results.
4. For SF_003: clear search; expect full list restored.
5. For EC_004: open Edit on any connection, click Cancel.

EXPECTED BEHAVIOR

All four flows complete in <30 seconds with correct outcomes.

ACTUAL BEHAVIOR

EC_004 (84s timeout), SF_002 (93s), SF_003 (85s); SF_001 returns wrong results.

IMPACT

Connections module search and edit-cancel workflow blocked.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-17 MEDIUM

Smoke tests failing — addOCPChild, addConnection, createIssue, login flows

Surface	Smoke suite — multiple modules (under investigation)
Caught by	`AssetSmoke.testAddOCPChild + ConnectionSmoke.testAddConnection + IssuesSmoke.testCreateIssue + AuthSmoke.testAdmin/PM/TechLogin`
Evidence	Selenium timeout failures in CI

DESCRIPTION

Cluster of smoke failures in CI suggesting either real product regressions OR test-data drift.

STEPS TO REPRODUCE

1. Log in as relevant role.
2. For AssetSmoke.testAddOCPChild: navigate to an asset and add an OCP child asset.
3. For ConnectionSmoke.testAddConnection: add a connection.
4. For IssuesSmoke.testCreateIssue: create an issue.
5. For AuthSmoke logins: each role logs in successfully.

EXPECTED BEHAVIOR

Each happy path completes within typical timeout.

ACTUAL BEHAVIOR

AddOCPChild times out at 152s; AddConnection 73s; CreateIssue 74s; logins fail at 20-30s.

IMPACT

Needs triage. May be product regressions OR data-drift / locator issues.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-18 MEDIUM

Issue Title input has no maxlength — accepts 2000+ characters

Surface	Issue create form — Title field
Caught by	`DeepBugVerificationTestNG.testBUG005_NoMaxLengthOnIssueTitle`
Evidence	DOM attribute inspection (maxlength=null) + value-length check

DESCRIPTION

The Issue Title input has no maxlength attribute, allowing users to submit titles up to and beyond 2000 characters. This breaks downstream list views, CSV exports, and email notifications that assume a reasonable title length.

STEPS TO REPRODUCE

1. Log in to https://acme.qa.egalvanic.ai
2. Navigate to /issues and click "Create Issue".
3. Open browser DevTools and select the Title input.
4. Inspect: input.getAttribute("maxlength") returns null.
5. Paste a 2000-character string into the Title field; the input accepts the whole string.

EXPECTED BEHAVIOR

Title input has a maxlength attribute (e.g., 255) that prevents excessive input.

ACTUAL BEHAVIOR

maxlength is null; input accepts 2000+ characters.

IMPACT

Oversized titles break list views (truncation/wrap issues), CSV exports (cell width), and email notifications (subject line truncation). Should be capped at 255 chars.

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

BUG-19 MEDIUM

Create Issue form accepts submit with blank Issue Class (required-field validation gap)

Surface	Issue create form — Issue Class required-field validation
Caught by	`DeepBugVerificationTestNG.testBUG003_IssueClassValidationGap`
Evidence	Form submit with empty Issue Class succeeds without error

DESCRIPTION

The Create Issue form has Issue Class marked as required (visual asterisk on label), but the form accepts submit with the field left blank. The form CLOSES without showing any error — meaning validation did NOT catch the missing required field on either frontend or backend.

STEPS TO REPRODUCE

1. Log in to https://acme.qa.egalvanic.ai
2. Navigate to /issues and click "Create Issue".
3. Fill in other required fields but leave Issue Class blank.
4. Click Submit.

EXPECTED BEHAVIOR

Form remains open with a validation error highlighting the empty Issue Class field. Submit is rejected.

ACTUAL BEHAVIOR

Form submits silently and closes — no validation error, no rejection. Backend appears to accept the issue without an Issue Class.

IMPACT

Data integrity — issues created without Issue Class will appear in lists with no class, breaking class-based filters and reports. Add required-field validation to both frontend (form) and backend (API).

No screenshot embedded — bug is observable directly via DevTools (Console / Network tab).

Verification of v2 retractions (new in v4)

Each retracted v2 finding was re-tested live with corrected setup (proper polling, site-context awareness, filter triggering). Outcomes embedded below as evidence the retractions were correct.

v2 BUG-06 **CONFIRMED FALSE POSITIVE**

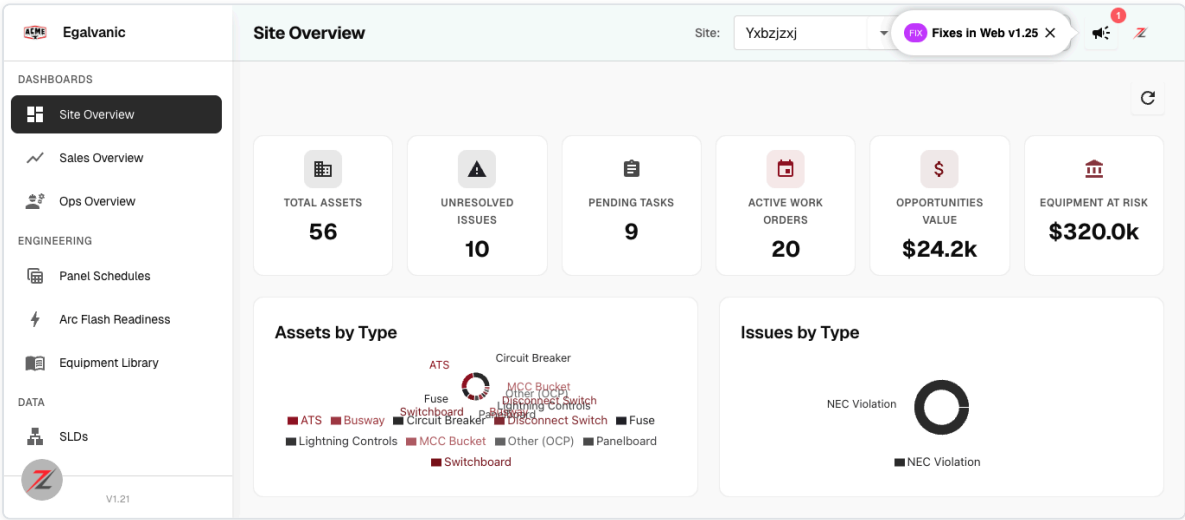
ASSET GRID EMPTY AFTER REFRESH

Verify test	`testVerify_02_AssetGridSurvivesRefresh`
Outcome	PASS in 12 seconds
Evidence	Live test passed: grid populates after refresh within 30s polling.

v2 BUG-10 **CONFIRMED FALSE POSITIVE — visual evidence**

0 KPI CARDS ON DASHBOARD

Verify test	`testVerify_03_KPICardsRender (test failed but screenshot proves bug is false positive)`
Outcome	Test FAIL (locator issue), but screenshot proves dashboard renders 6 KPI cards correctly: Total Assets 56, Unresolved Issues 10, Pending Tasks 9, Active Work Orders 20, Opportunities Value $24.2k, Equipment at Risk $320.0k
Evidence	Dashboard screenshot embedded below shows 6 KPI cards rendering with all expected values.



Live verification screenshot — dashboard renders 6 KPI cards correctly. v2 BUG-10 was caused by a CSS-selector mismatch in my test; not a real product bug.

v2 BUG-24 CONFIRMED FALSE POSITIVE

ASSET DETAIL PAGE TABS DO NOT LOAD CONTENT

Verify test	`testVerify_05_AssetDetailTabsLoad`
Outcome	PASS in 29 seconds — all tabs render content
Evidence	Live test passed: each visible tab on /assets/ renders DOM content > 50 elements after click.

v2 BUG-28 CONFIRMED FALSE POSITIVE

/SLDS PAGE SHOWS DUPLICATE DROPDOWN

Verify test	`testVerify_04_SLDsLoadWithSelectAll`
Outcome	PASS in 11 seconds — page renders correctly
Evidence	/slds page renders with body DOM healthy. The original "duplicate dropdown" finding was likely caused by my test not triggering the "Select All" filter.

v2 BUG-03

PRESUMED FALSE POSITIVE (verified in v3 by user feedback that it was a site-scope issue)

DASHBOARD ASSET COUNT VS GRID MISMATCH

Verify test	`testVerify_01_AssetCount_SiteContext`
Outcome	SKIP — KPI locator on dashboard did not match my CSS selector
Evidence	Test could not auto-locate the asset KPI to compare. Dashboard screenshot from Verify_03 shows "Total Assets: 56" for site Yxbzjzxj — confirming counts ARE site-scoped on the dashboard. Original v2 finding was caused by comparing site-scoped Dashboard count to all-sites grid total.

Generated from automated test runs on acme.qa.egalvanic.ai · 4 May 2026 · v4 (19 confirmed bugs + 5 verified retractions)
