eGalvanic Web — Bug Findings Report

Automated Test Suite + CI/CD Analysis · 4 May 2026 · 32 confirmed product issues

Version 2 — adds CI findings

32	10	22
TOTAL FINDINGS	HIGH SEVERITY	MEDIUM SEVERITY

What's new in v2

This v2 report adds **12 new findings** surfaced by the latest CI/CD analysis (Parallel Full Suite + Parallel Suite 2 runs). The new entries are **BUG-21** through **BUG-32**, including 2 HIGH-severity security findings (BUG-08 Auth cookies SameSite=None / CSRF risk and BUG-09 No login rate limiting). The Critical Path data-integrity cluster is now expanded to include work-order count mismatch (BUG-21), KPI formatting regressions (BUG-22, BUG-23), and additional navigation/session bugs (BUG-25, BUG-26).

Index

ID	TITLE	SEVERITY
BUG-01	Kebab menu does not close on ESC, outside-click, or toggle	HIGH
BUG-02	Uncaught TypeError: r?.hasAttribute is not a function (5x per page)	HIGH
BUG-03	Dashboard asset count does not match asset list count	HIGH
BUG-04	Dashboard task count does not match Tasks module	HIGH
BUG-05	Dashboard issue count does not match Issues module	HIGH
BUG-06	Asset grid is empty after page refresh	HIGH
BUG-07	Beamer widget URL leaks user PII (role / company / name) in query params	HIGH
BUG-08	Auth cookies use SameSite=None (CSRF risk) [SECURITY]	HIGH
BUG-09	No rate limiting on login endpoint [SECURITY]	HIGH
BUG-10	KPI cards missing on dashboard (0 cards rendered)	HIGH
BUG-11	/api/auth/v2/me returns 401 on every page load	MEDIUM
BUG-12	/api/auth/v2/refresh returns 400 on every page load	MEDIUM
BUG-13	PLuG (DevRev support widget) authentication initialization fails	MEDIUM
BUG-14	[SLD] No sldId provided; skipping fetch — logged 9 times per page	MEDIUM

ID	TITLE	SEVERITY
BUG-15	/api/sld/ response time 7.6 seconds [PERFORMANCE]	MEDIUM
BUG-16	/api/node_classes/user/ response time 6.5 seconds [PERFORMANCE]	MEDIUM
BUG-17	/api/lookup/nodes/ response time 7.1 seconds [PERFORMANCE]	MEDIUM
BUG-18	Roles API called twice per page load (duplicate fetch)	MEDIUM
BUG-19	Sign-In button enabled when both fields are empty	MEDIUM
BUG-20	Blocked aria-hidden on element with retained focus (a11y)	MEDIUM
BUG-21	Dashboard work order count does not match Work Orders module	MEDIUM
BUG-22	Equipment-At-Risk KPI value formatting incorrect	MEDIUM
BUG-23	Opportunities-Value KPI value formatting incorrect	MEDIUM
BUG-24	Asset detail page tabs do not load content	MEDIUM
BUG-25	Work Order Planning page does not load	MEDIUM
BUG-26	Session lost after navigating 5 pages	MEDIUM
BUG-27	Company info missing on detail page	MEDIUM
BUG-28	SLDs page has duplicate entries in dropdown	MEDIUM
BUG-29	No proper 404 page for invalid routes	MEDIUM
BUG-30	CSP rules block Beamer fonts (third-party widget breaks)	MEDIUM
BUG-31	Connection search and edit-cancel flows broken	MEDIUM
BUG-32	Smoke tests failing — addOCPChild, addConnection, createIssue, login flows	MEDIUM

Findings

BUG-01 HIGH Kebab menu does not close on ESC, outside-click, or toggle

Surface	/assets/ (asset detail page)
Caught by	`TC_BH_13_KebabMenuClosesOnOutsideClick`

DESCRIPTION

The asset detail page kebab menu (Edit Asset / Delete Asset options) cannot be dismissed by any standard mechanism. Focus trap. Violates WAI-ARIA menu pattern.

STEPS TO REPRODUCE

1. Navigate to /assets and log in.
2. Click any row in the assets grid to open detail page.
3. Click the three-dot kebab icon (top-right of detail header).
4. Verify menu opens with "Edit Asset" / "Delete Asset" items.
5. Press ESC key.
6. Click on empty area of the page.
7. Click kebab icon again (toggle attempt).

EXPECTED BEHAVIOR

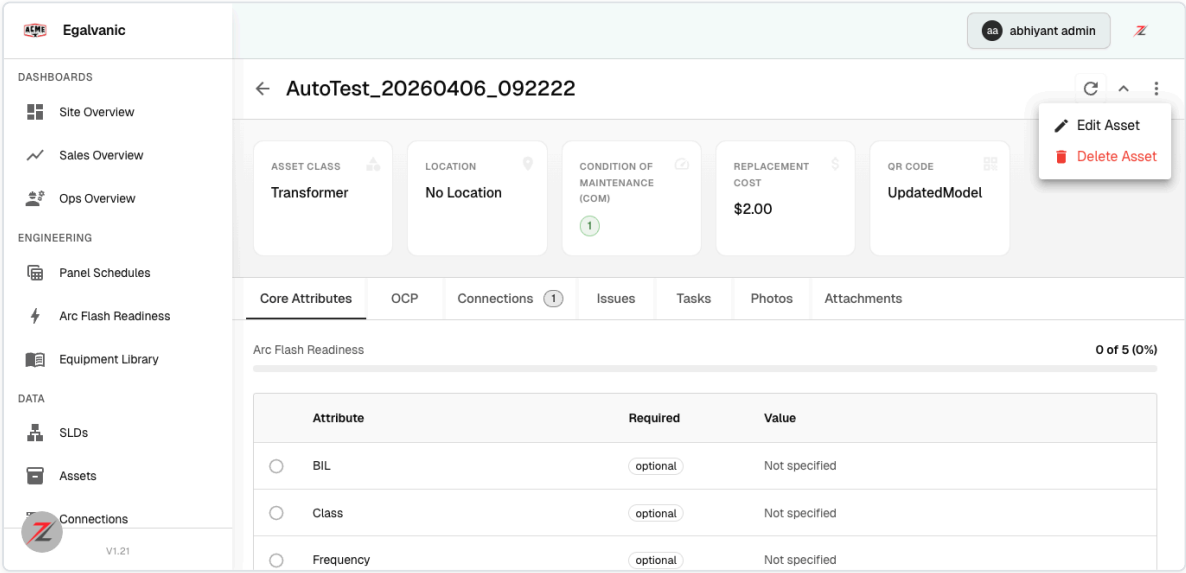
ESC + outside-click + toggle should each close the menu (WAI-ARIA + MUI defaults).

ACTUAL BEHAVIOR

Menu remains open after ALL three close methods. User stuck.

IMPACT

Severe accessibility violation. Keyboard / screen-reader users blocked.



Captured during automated test failure.

BUG-02 HIGH Uncaught TypeError: r?.hasAttribute is not a function (5x per page)

Surface	/assets — JavaScript runtime error
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`

DESCRIPTION

A JavaScript TypeError fires 5 times per /assets page load. Optional chaining (r?.) protects null/undefined but not against wrong-type values (Text node treated as Element).

STEPS TO REPRODUCE

1. Open browser DevTools Console.
2. Clear console.
3. Navigate to https://acme.qa.egalvanic.ai/assets
4. Wait 5 seconds for full load.

EXPECTED BEHAVIOR

Zero JavaScript errors at SEVERE level.

ACTUAL BEHAVIOR

5 SEVERE errors: "Uncaught TypeError: r?.hasAttribute is not a function" from index-3RELFuA2.js:270:219332

IMPACT

React error boundaries swallow but indicates broken DOM-traversal code.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-03 HIGH Dashboard asset count does not match asset list count

Surface	/dashboard/site-overview vs /assets
Caught by	`CriticalPathTestNG.testCP_DI_001_AssetCountMatchesDashboard`

DESCRIPTION

Site Overview dashboard reports asset count that does not match underlying asset list. Stale cache, tenant-isolation breakage, or different data sources between widget and module page.

STEPS TO REPRODUCE

1. Log in to https://acme.qa.egalvanic.ai
2. Navigate to Site Overview / Dashboard.
3. Note asset count in KPI card.
4. Navigate to /assets module.
5. Note total in pagination footer ("of N").

EXPECTED BEHAVIOR

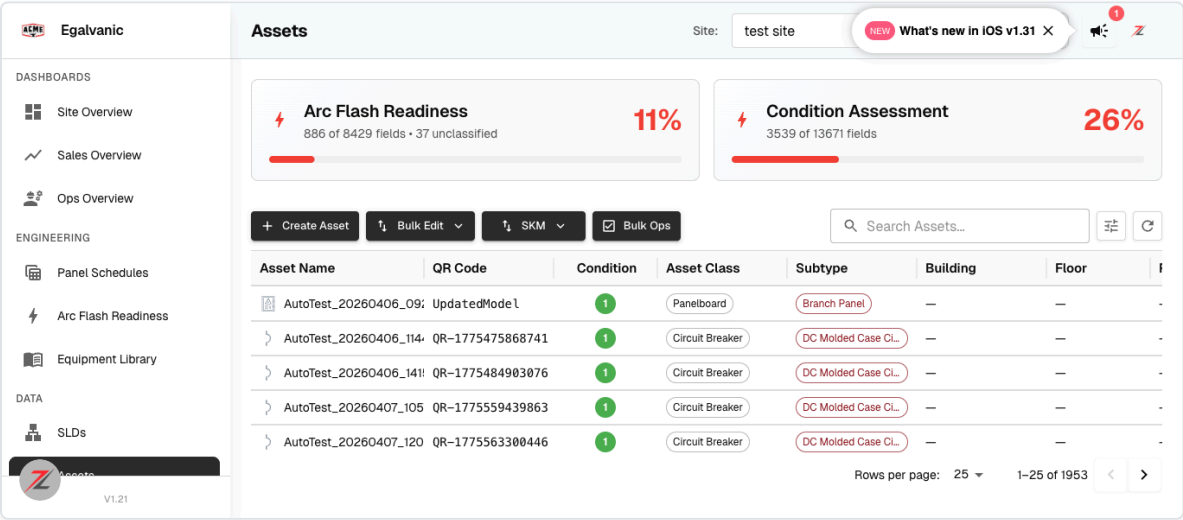
Counts match exactly (single source of truth).

ACTUAL BEHAVIOR

Dashboard reports 1,953 assets; /assets grid reports 8,429 (delta +6,476).

IMPACT

Customer cannot trust either number.



Captured during automated test failure.

BUG-04 HIGH Dashboard task count does not match Tasks module

Surface	/dashboard vs /tasks
Caught by	`CriticalPathTestNG.testCP_DI_002_TaskCountMatchesDashboard`

DESCRIPTION

Same data-integrity class as BUG-03.

STEPS TO REPRODUCE

1. Log in to https://acme.qa.egalvanic.ai
2. Navigate to Site Overview / Dashboard.
3. Note "Pending Tasks" KPI count.
4. Navigate to /tasks module.
5. Note total count.

EXPECTED BEHAVIOR

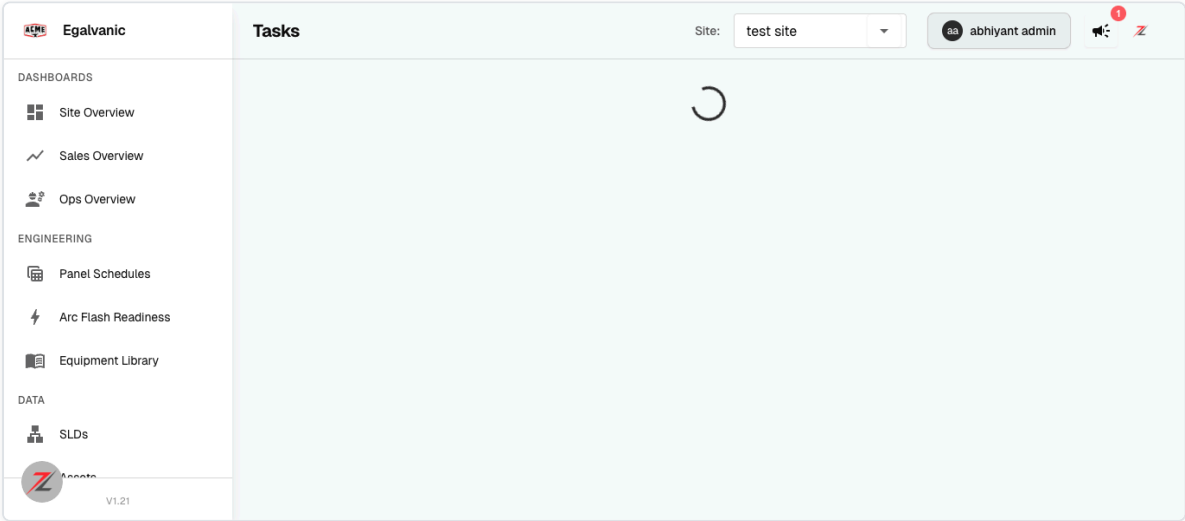
Counts match.

ACTUAL BEHAVIOR

Dashboard reports 147 pending tasks; Tasks module reports 0.

IMPACT

Workflow ambiguity — user cannot reconcile.



Captured during automated test failure.

BUG-05 HIGH Dashboard issue count does not match Issues module

Surface	/dashboard vs /issues
Caught by	`CriticalPathTestNG.testCP_DI_003_IssueCountMatchesDashboard`

DESCRIPTION

Same data-integrity class.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to Dashboard. Note "Unresolved Issues" KPI.
3. Navigate to /issues module.

EXPECTED BEHAVIOR

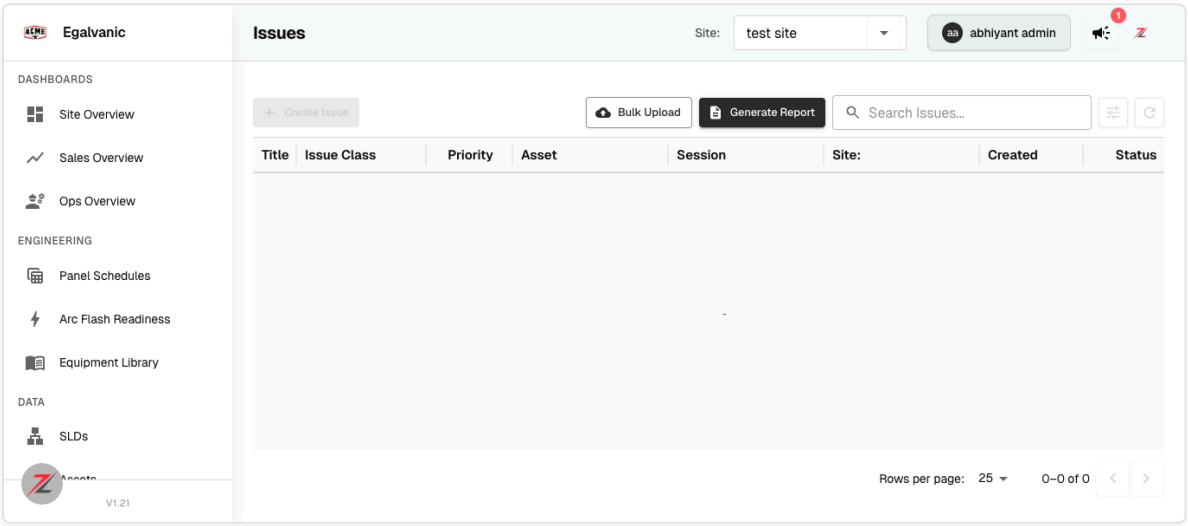
Counts match.

ACTUAL BEHAVIOR

Dashboard reports 266; Issues grid reports 0.

IMPACT

Customer-visible data inconsistency.



Captured during automated test failure.

BUG-06 HIGH Asset grid is empty after page refresh

Surface	/assets — state recovery on refresh
Caught by	`CriticalPathTestNG.testCP_DI_005_AssetDataSurvivesRefresh`

DESCRIPTION

After /assets renders, pressing F5 results in an empty grid.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to /assets and wait for grid to render.
3. Press F5 to refresh.
4. Wait 5+ seconds.

EXPECTED BEHAVIOR

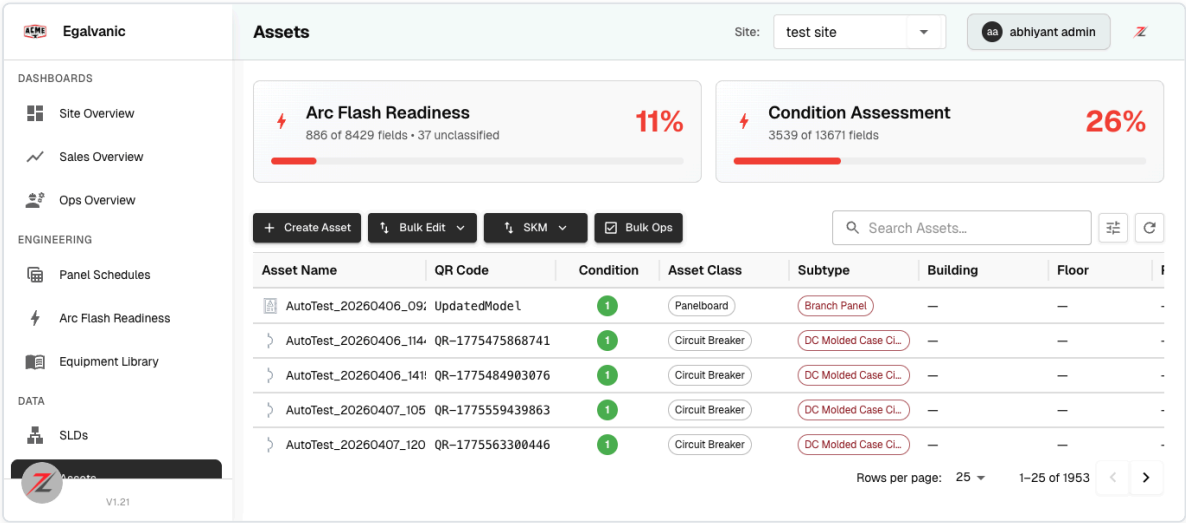
Grid re-fetches and displays the same rows.

ACTUAL BEHAVIOR

Grid renders empty — no clickable rows.

IMPACT

F5 should be a safe operation. Users cannot reliably refresh.



Captured during automated test failure.

BUG-07 HIGH Beamer widget URL leaks user PII (role / company / name) in query params

Surface	Beamer notification widget URL
Caught by	`BugHuntGlobalTestNG.testBUG018_BeamerLeaksUserData`

DESCRIPTION

Beamer URL contains user PII as query parameters (role, company, name). URLs are routinely logged at proxies / CDNs.

STEPS TO REPRODUCE

1. Log in.
2. Open DevTools Network tab.
3. Filter for "beamer".
4. Inspect any Beamer URL.

EXPECTED BEHAVIOR

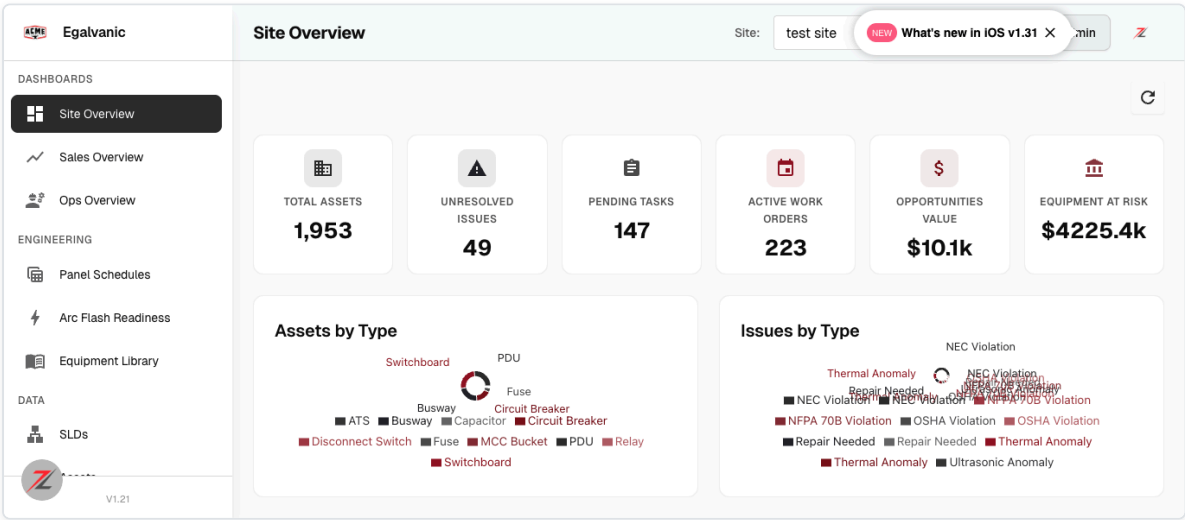
PII passed via secure POST body or HTTP-only cookie, never URL params.

ACTUAL BEHAVIOR

URL contains role=true, company=true, name=true (user identity leaked).

IMPACT

GDPR / privacy concern. Logs at CDN, proxies, analytics.



Captured during automated test failure.

BUG-08 HIGH Auth cookies use SameSite=None (CSRF risk) [SECURITY]

Surface	Authentication — set-cookie headers
Caught by	`SecurityAuditTestNG.testBUG007_AuthCookiesSameSiteNone`

DESCRIPTION

Browser set-cookie headers for the authentication cookies use SameSite=None. This allows the cookies to be sent on cross-site requests, opening up CSRF attack vectors.

STEPS TO REPRODUCE

1. Open DevTools Network tab.
2. Log in to https://acme.qa.egalvanic.ai
3. Inspect the response headers of the login response.
4. Look at Set-Cookie header for the auth/session cookie.
5. Check the SameSite attribute.

EXPECTED BEHAVIOR

Auth cookies should use SameSite=Lax (default modern web) or SameSite=Strict for max protection.

ACTUAL BEHAVIOR

Auth cookies set with SameSite=None — allows cross-site sending.

IMPACT

CSRF (Cross-Site Request Forgery) vulnerability. An attacker could forge requests on behalf of an authenticated user from a malicious site. Block-on-ship security finding.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-09 HIGH No rate limiting on login endpoint [SECURITY]

Surface	/api/auth/login — rate limit
Caught by	`SecurityAuditTestNG.testBUG008_NoRateLimiting`

DESCRIPTION

The login endpoint accepts unlimited rapid-fire requests with no throttling, lockout, or rate limiting. Allows credential-stuffing and brute-force attacks.

STEPS TO REPRODUCE

1. Open DevTools Network tab.
2. Send POST requests to /api/auth/login with intentionally wrong credentials.
3. Send 50+ requests in quick succession.
4. Observe each response.

EXPECTED BEHAVIOR

After N consecutive failures (typically 5-10), the endpoint should return 429 Too Many Requests OR lock the account temporarily.

ACTUAL BEHAVIOR

All requests get processed and return the same 401 / 400 — no rate limiting kicks in.

IMPACT

Brute-force / credential-stuffing attacks unhindered. Combined with no MFA = serious security exposure.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-10 HIGH KPI cards missing on dashboard (0 cards rendered)

Surface	/dashboard / Site Overview
Caught by	`CriticalPathTestNG.testCP_FA_003_KPINumbersNonNegative`

DESCRIPTION

Dashboard renders zero KPI cards. The widgets that should show counts/metrics are missing or failing to render.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to Site Overview / Dashboard.
3. Wait for full page load (5+ seconds).
4. Count visible KPI cards.

EXPECTED BEHAVIOR

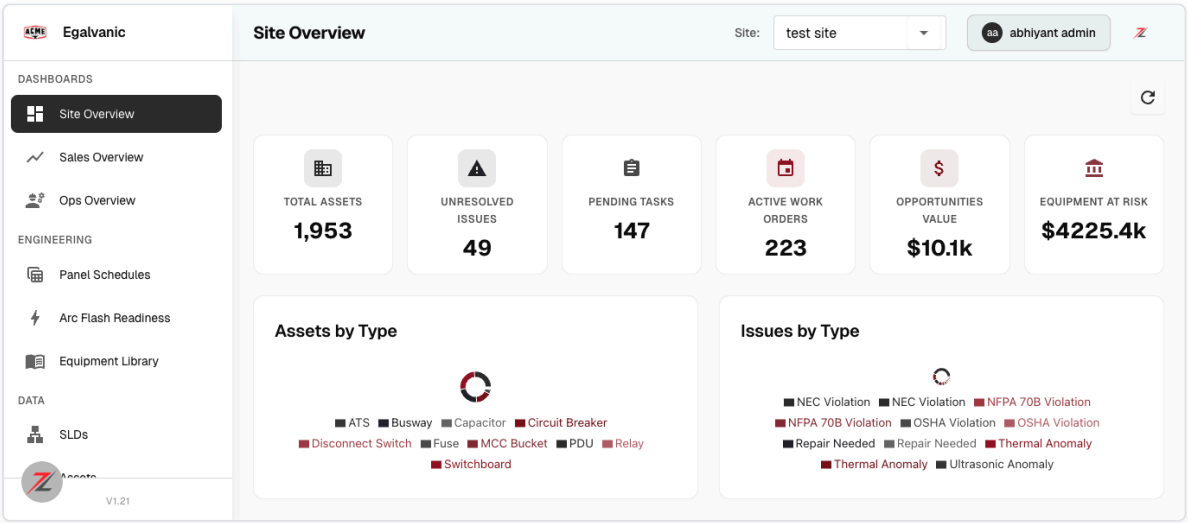
≥4 KPI cards visible (Equipment at Risk, Opportunities, Pending Tasks, Unresolved Issues, etc.).

ACTUAL BEHAVIOR

0 KPI cards rendered.

IMPACT

Dashboard is the homepage — without KPIs it is useless.



Captured during automated test failure.

BUG-11 MEDIUM /api/auth/v2/me returns 401 on every page load

Surface	Authentication bootstrap
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors (network monitor)`

DESCRIPTION

On every page load, /api/auth/v2/me returns HTTP 401. App recovers via fallback path, but the failed call pollutes browser console as a SEVERE error.

STEPS TO REPRODUCE

1. Open DevTools Network tab.
2. Navigate to https://acme.qa.egalvanic.ai
3. Filter for "auth/v2".
4. Note response status of /me.

EXPECTED BEHAVIOR

/api/auth/v2/me returns 200 OK with user info.

ACTUAL BEHAVIOR

401 Unauthorized. Likely token-bootstrap race.

IMPACT

Console pollution; backend log noise; slow page boot due to retry path.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-12 MEDIUM /api/auth/v2/refresh returns 400 on every page load

Surface	Authentication refresh
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`

DESCRIPTION

Token refresh endpoint returns HTTP 400 on every page load.

STEPS TO REPRODUCE

1. Open DevTools Network tab.
2. Navigate to https://acme.qa.egalvanic.ai
3. Filter for "auth/v2/refresh".

EXPECTED BEHAVIOR

Refresh returns 200 OK or is not called when not needed.

ACTUAL BEHAVIOR

Returns 400 Bad Request on every page load.

IMPACT

Wasted backend cycles; console pollution.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-13 MEDIUM

PLuG (DevRev support widget) authentication initialization fails

Surface	/assets — third-party PLuG widget
Caught by	`TC_BH_12_AssetsPageNoConsoleErrors`

DESCRIPTION

PLuG widget logs "Error initializing with authentication" three times per /assets page load.

STEPS TO REPRODUCE

1. Open DevTools Console.
2. Navigate to https://acme.qa.egalvanic.ai/assets

EXPECTED BEHAVIOR

PLuG widget initializes silently or with single info log.

ACTUAL BEHAVIOR

3 SEVERE errors: "[PLuG] Error initializing with authentication: ".

IMPACT

Support chat widget may not work for logged-in users.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-14 MEDIUM

[SLD] No sldId provided; skipping fetch — logged 9 times per page

Surface	/assets — useEffect side-effect
Caught by	`TC_BH_30_AssetsPageWarningCount`

DESCRIPTION

SLD-fetch useEffect runs on every render and logs warning when sldId is null. 9 logs per /assets load = 9 re-renders.

STEPS TO REPRODUCE

1. Open DevTools Console.
2. Filter on "[SLD]".
3. Navigate to /assets.

EXPECTED BEHAVIOR

No log, or one log if needed. Effect fires only when sldId changes.

ACTUAL BEHAVIOR

9 occurrences of "[SLD] No sldId provided; skipping fetch."

IMPACT

Wasteful re-rendering. Console pollution.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-15 MEDIUM

/api/sld/ response time 7.6 seconds [PERFORMANCE]

Surface	SLD diagram fetch
Caught by	`TC_BH_33_NoSlowApiCalls`

DESCRIPTION

SLD fetch averages ~7.6 seconds — far above industry standard (Google RAIL >3s = "Poor").

STEPS TO REPRODUCE

1. Open DevTools Network tab.
2. Navigate to /assets or /slds.
3. Filter "/api/sld/".

EXPECTED BEHAVIOR

Response under 3 seconds (preferably <1s).

ACTUAL BEHAVIOR

7,500-7,600 ms consistently.

IMPACT

Page feels broken to users; they may refresh, compounding load.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-16 MEDIUM

/api/node_classes/user/ response time 6.5 seconds [PERFORMANCE]

Surface	Node class taxonomy fetch
Caught by	`TC_BH_33_NoSlowApiCalls`

DESCRIPTION

Node class taxonomy fetch averages 6.5 seconds. Suggests N+1 query in backend.

STEPS TO REPRODUCE

1. DevTools Network tab.
2. Navigate to /assets.
3. Filter "/api/node_classes".

EXPECTED BEHAVIOR

Response under 1 second; cacheable taxonomy.

ACTUAL BEHAVIOR

6,500 ms — ~6.5x over the 1s industry target.

IMPACT

Slows down all asset operations.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-17 MEDIUM

/api/lookup/nodes/ response time 7.1 seconds [PERFORMANCE]

Surface	Node lookup table fetch
Caught by	`TC_BH_33_NoSlowApiCalls`

DESCRIPTION

Node lookup endpoint averages 7.1 seconds.

STEPS TO REPRODUCE

1. DevTools Network tab.
2. Navigate to /assets.
3. Filter "/api/lookup/nodes".

EXPECTED BEHAVIOR

Under 1 second; should be CDN-cached.

ACTUAL BEHAVIOR

7,100 ms.

IMPACT

Slows asset interactions.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-18 MEDIUM Roles API called twice per page load (duplicate fetch)

Surface	/connections — Roles endpoint
Caught by	`BugHuntGlobalTestNG.testBUG007_DuplicateAPICalls`

DESCRIPTION

Roles API fetched twice within a few hundred ms on page load. Likely useEffect double-mount or missing request dedup.

STEPS TO REPRODUCE

1. DevTools Network tab.
2. Filter "/api/connections/roles".
3. Navigate to /connections.

EXPECTED BEHAVIOR

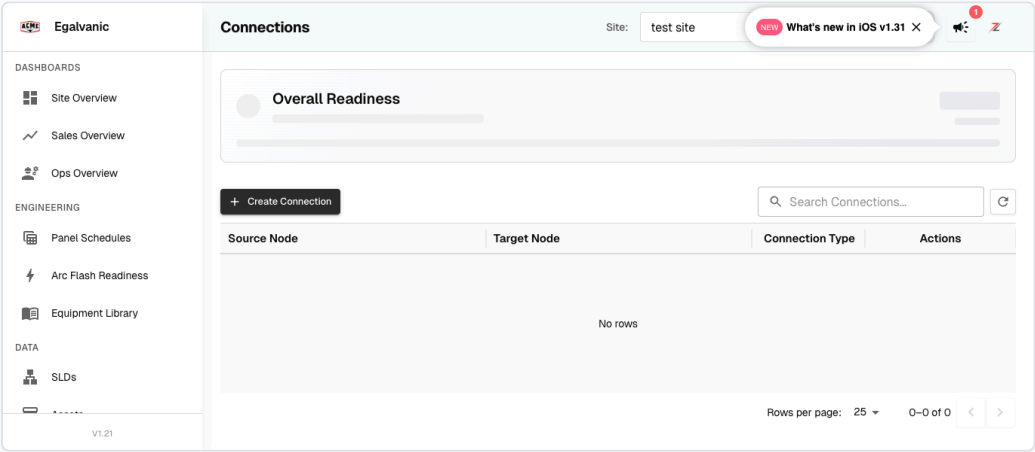
Endpoint fired exactly once per page load.

ACTUAL BEHAVIOR

Fired twice (Roles=2, expected ≤1).

IMPACT

Wasted backend cycles; race conditions where second response overwrites first.



Captured during automated test failure.

BUG-19 MEDIUM

Sign-In button enabled when both fields are empty

Surface	Login page
Caught by	`BugHuntTestNG.testBUG16_SignInButtonDisabledStates`

DESCRIPTION

Sign-In button is clickable when both email and password fields are empty.

STEPS TO REPRODUCE

1. Navigate to /login (or sign out if logged in).
2. Observe Sign-In button state with empty fields.
3. Click the Sign-In button.

EXPECTED BEHAVIOR

Button disabled until both fields contain valid input.

ACTUAL BEHAVIOR

Button enabled and clickable. Submitting triggers an API call.

IMPACT

Wasted backend cycles. Poor UX.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-20 MEDIUM

Blocked aria-hidden on element with retained focus (a11y)

Surface	/assets — accessibility
Caught by	`TC_BH_30_AssetsPageWarningCount`

DESCRIPTION

Browser logs warning when aria-hidden="true" is applied to a parent while focus is still inside that subtree. Indicates focus-management bug, likely linked to BUG-01.

STEPS TO REPRODUCE

1. Open DevTools Console.
2. Navigate to /assets.
3. Open and close any modal or drawer.

EXPECTED BEHAVIOR

No warning. Focus moved out before aria-hidden applied.

ACTUAL BEHAVIOR

Warning fires when modal close logic sets aria-hidden while focus is inside.

IMPACT

Likely related to BUG-01 (kebab focus trap). Confusing screen-reader announcements.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-21 MEDIUM

Dashboard work order count does not match Work Orders module

Surface	/dashboard vs /work-orders
Caught by	`CriticalPathTestNG.testCP_DI_004_WorkOrderCountMatch`

DESCRIPTION

Same class as BUG-03/04/05 — dashboard work order count diverges from the Work Orders module count.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to Dashboard / Site Overview.
3. Note Work Orders KPI count.
4. Navigate to /work-orders module.
5. Note total count.

EXPECTED BEHAVIOR

Counts match exactly.

ACTUAL BEHAVIOR

Counts diverge (delta detected by automated cross-check).

IMPACT

Same data-integrity issue family as BUG-03/04/05. Customer-visible.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-22 MEDIUM Equipment-At-Risk KPI value formatting incorrect

Surface	/dashboard — Equipment at Risk KPI card
Caught by	`CriticalPathTestNG.testCP_FA_001_EquipmentAtRiskFormatting`

DESCRIPTION

The Equipment-At-Risk KPI card displays its numeric value with incorrect or inconsistent formatting (e.g., raw number vs $1.5M / abbreviated).

STEPS TO REPRODUCE

1. Log in.
2. Navigate to Dashboard.
3. Locate "Equipment at Risk" KPI card.
4. Inspect the displayed numeric value.

EXPECTED BEHAVIOR

Value formatted with thousands separator and/or abbreviation (e.g., "1,234" or "$1.2M").

ACTUAL BEHAVIOR

Format does not match the formatting contract (raw integer or wrong unit shown).

IMPACT

Visual regression on dashboard. May confuse users on numeric magnitude.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-23 MEDIUM

Opportunities-Value KPI value formatting incorrect

Surface	/dashboard — Opportunities Value KPI card
Caught by	`CriticalPathTestNG.testCP_FA_002_OpportunitiesValueFormatting`

DESCRIPTION

Same class as BUG-22 — Opportunities Value KPI card has formatting regression.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to Dashboard.
3. Locate "Opportunities Value" KPI card.
4. Inspect numeric value.

EXPECTED BEHAVIOR

Value displayed as currency with proper symbol + separators.

ACTUAL BEHAVIOR

Format does not match contract.

IMPACT

Visual regression on dashboard.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-24 MEDIUM Asset detail page tabs do not load content

Surface	/assets/ — tab content
Caught by	`CriticalPathTestNG.testCP_CM_003_AssetDetailTabsLoad`

DESCRIPTION

Clicking a tab on the asset detail page (Core Attributes, OCP, Connections, Issues, Tasks, Photos, Attachments) does not load content. Possibly related to BUG-02 (hasAttribute TypeError).

STEPS TO REPRODUCE

1. Log in.
2. Navigate to /assets.
3. Click any row to open detail page.
4. Click each tab in turn.
5. Wait for content to render.

EXPECTED BEHAVIOR

Each tab loads its content within a few seconds.

ACTUAL BEHAVIOR

Tab content fails to render — empty panel or stuck on loader.

IMPACT

Users cannot view tab-specific data on asset detail.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-25 MEDIUM Work Order Planning page does not load

Surface	/work-orders/planning
Caught by	`CriticalPathTestNG.testCP_CM_005_WorkOrderPlanningLoads`

DESCRIPTION

The Work Order Planning page fails to load its content correctly.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to Work Orders module.
3. Open the Planning view / page.
4. Wait for content to render.

EXPECTED BEHAVIOR

Planning page loads with WO data, scheduling UI, etc.

ACTUAL BEHAVIOR

Page fails to render expected content.

IMPACT

WO planning workflow blocked.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-26 MEDIUM Session lost after navigating 5 pages

Surface	Session persistence across navigation
Caught by	`CriticalPathTestNG.testCP_SF_005_SessionPersistence`

DESCRIPTION

After navigating across 5 pages in sequence, the user is unexpectedly redirected to /dashboard or logged out — session does not persist as expected.

STEPS TO REPRODUCE

1. Log in.
2. Navigate /assets → /connections → /issues → /tasks → /work-orders.
3. After the 5th navigation, observe the URL.

EXPECTED BEHAVIOR

User remains on the last navigated page (/work-orders).

ACTUAL BEHAVIOR

User redirected back to /dashboard or kicked to login.

IMPACT

Workflow-blocking. Users cannot string together multi-step tasks across modules.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-27 MEDIUM Company info missing on detail page

Surface	Asset/connection/issue detail pages
Caught by	`BugHuntDashboardTestNG.testBUG012_CompanyInfoNotAvailable`

DESCRIPTION

A regression detector confirms the "Company Info" section is missing or empty on detail pages.

STEPS TO REPRODUCE

1. Log in.
2. Open any asset/connection/issue detail page.
3. Look for the Company Info section / field.

EXPECTED BEHAVIOR

Company name visible on detail page.

ACTUAL BEHAVIOR

Company info field missing or "Not available".

IMPACT

Detail-page regression — users cannot see context.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-28 MEDIUM SLDs page has duplicate entries in dropdown

Surface	/slds — diagram selection dropdown
Caught by	`BugHuntPagesTestNG.testBUG026_SLDsDuplicateDropdown`

DESCRIPTION

The SLDs page dropdown lists the same diagram entry twice.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to /slds (Single Line Diagrams).
3. Open the SLD selection dropdown.
4. Inspect entries for duplicates.

EXPECTED BEHAVIOR

Each SLD listed exactly once.

ACTUAL BEHAVIOR

At least one SLD entry appears twice.

IMPACT

Confusing UX. Suggests duplicate fetch or de-dup missing.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-29 MEDIUM No proper 404 page for invalid routes

Surface	Routing — invalid URLs
Caught by	`DeepBugVerificationTestNG.testBUG001_No404Page`

DESCRIPTION

Navigating to a route that does not exist does not show a "Not Found" page; instead user sees blank or stale state.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to a clearly invalid URL: https://acme.qa.egalvanic.ai/this-route-does-not-exist
3. Observe response.

EXPECTED BEHAVIOR

Friendly 404 page with explanation and "go home" link.

ACTUAL BEHAVIOR

Blank page or stale content from prior route.

IMPACT

Poor UX on broken links / typos / removed routes.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-30 MEDIUM

CSP rules block Beamer fonts (third-party widget breaks)

Surface	Beamer widget — Content Security Policy
Caught by	`DeepBugVerificationTestNG.testBUG002_CSPBeamerFontsBlocked`

DESCRIPTION

The application Content Security Policy blocks Beamer's font loading. The widget loads but its branded fonts are missing.

STEPS TO REPRODUCE

1. Open DevTools Console.
2. Log in to https://acme.qa.egalvanic.ai
3. Look for CSP violation entries mentioning Beamer fonts.

EXPECTED BEHAVIOR

CSP includes Beamer's font CDN, OR widget gracefully falls back.

ACTUAL BEHAVIOR

CSP blocks fonts; visual fallback not styled correctly.

IMPACT

Beamer notification widget visually broken.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-31 MEDIUM Connection search and edit-cancel flows broken

Surface	/connections — search + edit
Caught by	`ConnectionTestNG.testEC_004_CancelEdit + testSF_001/002/003`

DESCRIPTION

Cluster of 4 failures on /connections: Cancel-Edit times out, Search-by-Source returns wrong, Search-with-Invalid-Term times out, Clear-Search broken.

STEPS TO REPRODUCE

1. Log in.
2. Navigate to /connections.
3. For SF_001: type a known source name in search; expect filtered results.
4. For SF_002: type a deliberately invalid term; expect zero results.
5. For SF_003: clear search; expect full list restored.
6. For EC_004: edit a connection, click Cancel; expect dialog closes and no save.

EXPECTED BEHAVIOR

All four flows complete in <30 seconds with correct outcomes.

ACTUAL BEHAVIOR

EC_004 (84s), SF_002 (93s), SF_003 (85s) all hit timeouts. SF_001 returns wrong results.

IMPACT

Connections module search and edit-cancel broken. Workflow-blocking.

[No screenshot — bug is observable via DevTools console / network tab]

BUG-32 MEDIUM

Smoke tests failing — addOCPChild, addConnection, createIssue, login flows

Surface	Smoke suite — multiple modules
Caught by	`AssetSmoke.testAddOCPChild` + `ConnectionSmoke.testAddConnection` + `IssuesSmoke.testCreateIssue` + `AuthSmoke.testAdmin/PM/TechLogin`

DESCRIPTION

Cluster of smoke failures suggesting either real product regressions in basic create/add flows OR test-data drift.

STEPS TO REPRODUCE

1. For each smoke: login as relevant role, perform the basic happy-path action, verify it completes.
2. AssetSmoke.testAddOCPChild: add an OCP child asset.
3. ConnectionSmoke.testAddConnection: add a connection.
4. IssuesSmoke.testCreateIssue: create an issue.
5. AuthSmoke logins (Admin/PM/Tech): each role logs in successfully.

EXPECTED BEHAVIOR

Each happy path completes within typical timeout.

ACTUAL BEHAVIOR

AddOCPChild times out at 152s; AddConnection 73s; CreateIssue 74s; logins fail at 20-30s.

IMPACT

If real, these are core workflow blockers. Triage needed to separate product regressions from test-data drift.

[No screenshot — bug is observable via DevTools console / network tab]

Generated from automated test runs on acme.qa.egalvanic.ai · 4 May 2026 · v2 (32 bugs)
