

Three bugs for V1.36

All three reproduced live on QA. Each has a screenshot, numbered steps, and what happened versus what should happen. Nothing was created or changed.

Env `acme.qa.egalvanic.ai` Build `V1.36` Verified 26 Aug 2026

BUG 1 HIGH role: Technician

A Technician can log into the web portal and see the whole sales pipeline

Rows per page: 10 1-10 of 131

Signed in as `abhiyant.singh+tec@egalvanic.com` — 131 quotes, customer names, values, a **New Quote** button and a delete control on every row.

Steps

- 1
- Sign in as `abhiyant.singh+tec@egalvanic.com`
- 2
- You land on `/dashboard`
- 3
- Open **Sales** → **Quotes**

ACTUAL

The Technician gets into the web portal and sees every quote, customer and value. The account holds

93

permissions — more than a Project Manager (90) — including `quotes.approve`, `accounts.manage` and `data.export`.

EXPECTED

A Technician is a mobile-only role. They should be stopped at the "WEB ACCESS RESTRICTED" page and never reach a dashboard.

```
GET /api/auth/v2/me as the Technician account
roles      [ "Technician" ]    ← one role, no admin overlay
permissions 93
platform.web true              ← this is what lets them in
```

When it started:

the automated check for this passed on 18 Jun and has failed every run since 9 Jul — about seven weeks.

Please confirm:

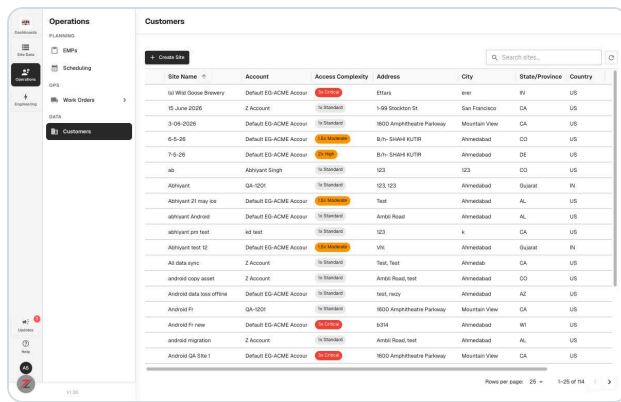

is a Technician meant to use the web portal at all? If yes, the permission set still needs trimming; if no, the

`platform.web`

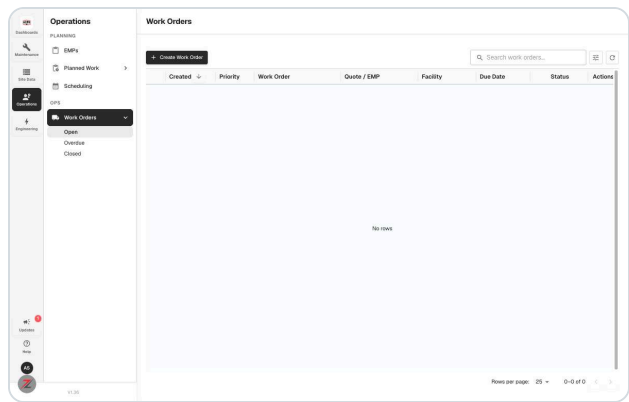

grant is the whole fix. Checked on QA only — worth confirming the production Technician role too.

BUG 2 MEDIUM Project Manager vs Facility Manager

Facility Manager has no way to reach Customers, though they are allowed to use it

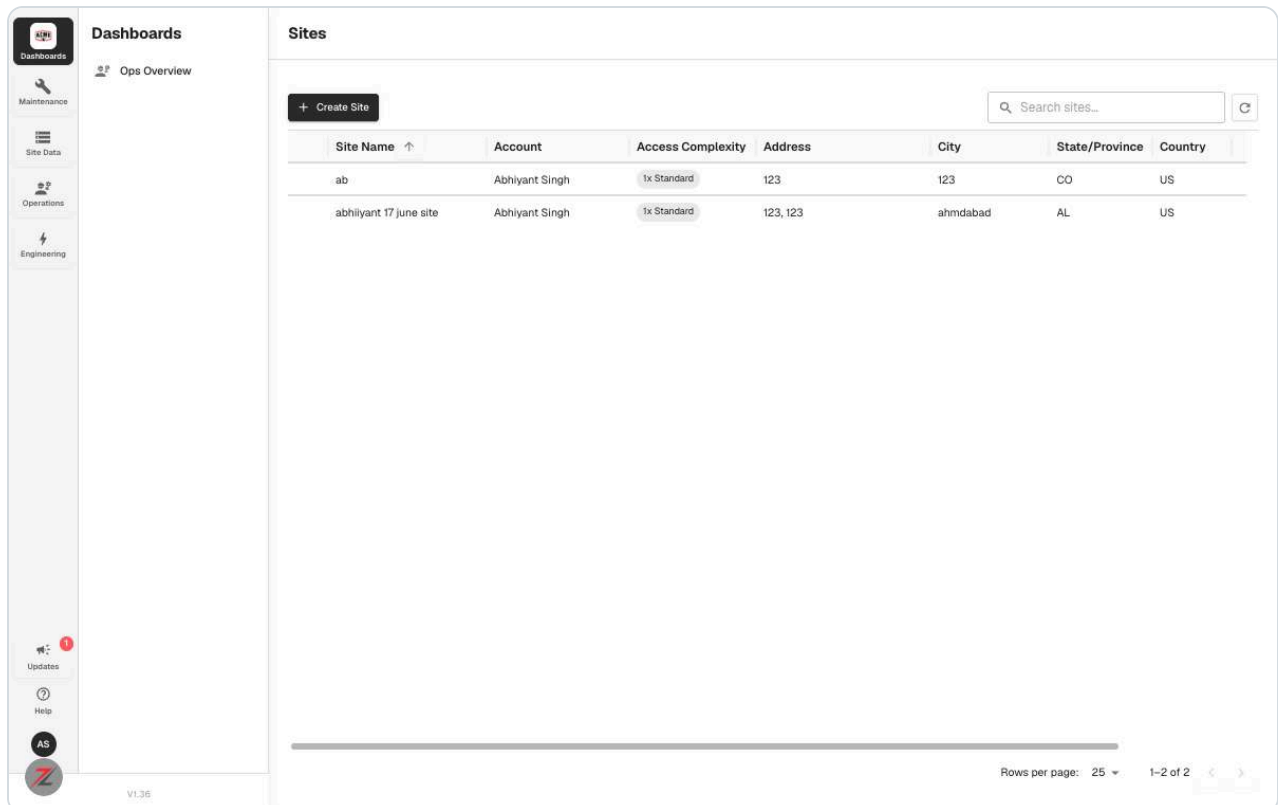

Project Manager — Customers is there, under Operations → DATA.

Facility Manager — same panel, same permission, no Customers anywhere.

Steps

- 1 Sign in as `abhiyant.singh+project@egalvanic.com` → open **Operations**. Customers is listed.
- 2 Sign out. Sign in as `abhiyant.singh+fm@egalvanic.com` → open **Operations**, and check every other section too.
- 3 Still as the Facility Manager, type `/customers` into the address bar.

Step 3 — the page loads fine and **Create Site** is available, but the sidebar falls back to **Dashboards**: nothing shows where you are.

ACTUAL

EXPECTED

Customers appears for the Project Manager (under

OPERATIONS

) and for Admin, Account Manager and Technician (under

SALES

) — but for the Facility Manager it appears nowhere, even though the page works when opened by URL.

Both roles hold

`features.customers.view`, so both should get the link — and it should sit in the same section for everyone.

Project Manager	<code>features.customers.view</code> TRUE · <code>features.accounts.view</code> false → show
Facility Manager	<code>features.customers.view</code> TRUE · <code>features.accounts.view</code> false → show

The automated UI check reports the mirror image of this for the Project Manager (“Customers should be hidden but is visible”), so the two roles disagree about which permission controls this link. Worth deciding which is correct before fixing either.

BUG 3 MEDIUM </maintenance/program>

Maintenance Program: the site picker disappears, so you cannot change site

Reproduced on every role tested, on a site that has a real maintenance program.

Not a bug — role visibility is per requirement.

I originally flagged that Client Portal and Facility Manager see the Maintenance section while Admin does not, and argued Admin should see everything a customer role sees.

That was wrong:

per requirement the Admin is

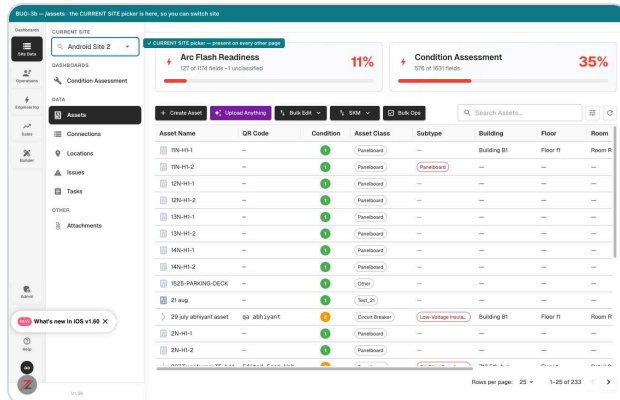

not

meant to see Maintenance. Observed visibility — Client Portal and Facility Manager only, with Admin, Project Manager, Account Manager and Technician all excluded — is correct. Withdrawn.

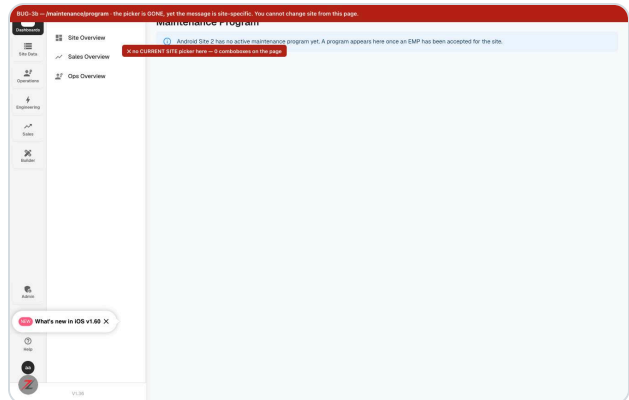

One thing still worth a decision, separately: the route has no permission gate. No role holds any `maintenance.*` permission, so visibility is nav-only — every role, Admin included, can still open

/maintenance/program by typing the URL and it renders. Low risk, but if the section is meant to be customer-facing only, the route should enforce that too.

The site picker disappears on this page

/assets — CURRENT SITE picker present, as on every other page.

/maintenance/program — picker gone, yet the message names a site.

Steps

- 1 Sign in as any role and open /assets — the **CURRENT SITE** picker is in the sidebar.
- 2 Click **Maintenance → Maintenance Program** (or go to /maintenance/program).
- 3 Look for the site picker.

ACTUAL

The picker is gone — zero comboboxes on the page — but the message still says *"Android Site 2 has no active maintenance program yet."* You are looking at one site's information with no way to switch to another.

EXPECTED

The site picker should stay visible, since the page shows site-specific content. Otherwise you must leave the page, change site elsewhere, and come back.

same session, same role, measured on the page:

/assets	2 site comboboxes	• "CURRENT SITE" label present
/maintenance/program	0 comboboxes	• no "CURRENT SITE" label

confirmed for Project Manager, Account Manager, Facility Manager, Client Portal, Technician and Admin

The wording also differs by role — Facility Manager sees “This site has no active maintenance program yet” where others see the site’s name. Minor, but likely the same code path.

All three verified by signing into each role through the real login form, clearing cookies and browser storage between roles. Nothing was created, edited or deleted on QA.
