| About Tool | It is the tool for the entire lifecycle of API. It is also known as Open API and helps in generating useful documentation.                                                                               | Rest Assured enables you to test REST APIs using java libraries and integrates well with Maven. Rest Assured has methods to fetch data from almost every part of the request and response no matter how complex the JSON structures are.                                                                                                                                                                                                              | Postman is an application used for API testing. It is an HTTP client that tests HTTP requests, utilizing a graphical user interface, through which we obtain different types of responses that need to be subsequently validated.                                                                                                                |
| Used For   | API Management<br>API Testing<br>Software Documentation                                                                                                                                                  | API Testing                                                                                                                                                                                                                                                                                                                                                                                                                                           | API Design<br>API Management<br>API Testing                                                                                                                                                                                                                                                                                                      |
| Setup      | Step 1) Download and Install NodeJs.<br>Step 2) Download the Swagger Editor and UI.<br>Step 3) Install the HTTPS Server.<br>Step 4) Install and Build the Source Code.<br>Step 5) Run theSwagger Editor. | Step 1) Install Java<br>Step 2) Download an IDE to begin: eclipse<br>Step 3) InstallMaven and set up your eclipse.<br>Step 4) Create a Maven Project in your IDE.<br>Step 5) Open your POM.xml<br>Step 6) Add the rest assured dependency to your POM.xml                                                                                                                                                                                             | Step 1) Go to the link <a href="https://www.postman.com/downloads/">https://www.postman.com/downloads/</a> and click download for Mac or Windows or Linux based on your operating system.<br>Step 2) For downloading the app for Windows, click on the download button and select the particular version.                                        |
| Advantage  | 1) Generate REST API documentation and synchronise the API documentation with the server and client at the same pace.<br>2) Provides responses in the format of JSON and XML                             | 1) Easy to use as it supports a Given/When/Then test notation, which instantly makes your test human-readable.<br>2) Easy to integrate with JUnit and TestNG frameworks.<br>3) As it is a Java client, it supports the ability to reuse the code for a new function.<br>4) We can easily integrate with other tools like Maven, Jenkins, GitHub to provide Continuous Integration and Continuous Deployment functionality.<br>5) Can be used with any | 1) You don't need a separate IDE or knowledge about working in IDE's. Postman tool as such provides you all the functionalities.<br>2) People who don't have any programming experience prior can easily get adopted with Postman.<br>3) Last but not least, you have wonderful community support where we are trying to help the Postman users. |
